

The [Pedal 4 Pierce](#) team were introduced to [Glorfy unbreakable](#) at the Rocky Trail Shimano Grand Prix Round 2. Set amongst the vineyards of James Estate we had our transition tent setup and our riders were enjoying the trails. Shortly after the race started Paul from Glorfy setup his tent and layed out his range of eyewear next to our team tent. During the day the team had a try of the glasses and got chatting about what Pedal 4 Pierce does, without hesitation (or asking) Paul donated two sets of goggles for the next fundraiser and from there our friendship and relationship with Glorfy started.

A few phone calls, a catch up over coffee and a demo at Onya Bike followed. Chris and I had soon chosen a set of glasses to test out at the next race. Paul hooked us up with the G9 (Chris) and G4 (Nigel) models and for the race at Ourimbah had selected the Orange lenses to match our logo!

We have always made sure we get a good set of glasses for riding, wether its in full sunlight, complete darkness of even commuting in the rain, protecting your eyes is a high priority. So when Paul explained that these glasses (frames and lenses) are unbreakable we had to give this a try! Taking a hammer to the lenses, squeezing them together and then twisting the frames to places they just shouldn't be without damaging them you know they really are unbreakable!

Putting on the different lenses really puts the hard work and testing by Glorfy in to perspective, the clarity and comfort of these glasses are just amazing. As stated, our first race wearing the Glorfy glasses was at Ourimbah, an ever changing track with multiple changes in light and terrain. To say these glasses performed well above expectations is an understatement, as Chris said "these glasses are awesome, so light, perfect vision and worked so well in the varying conditions, even out here in full sunlight"

The visual clarity was superb in the singletrack, every item of the trail stood out and at some points helped bring track conditions to the fore. The changes from full sun and light trails to forest engulfed dark soil terrain were displayed with clarity, at times you even forgot you had the glasses on, they are seriously light!

Since race day we've tested the glasses in all conditions, commuting in dense fog, heavy rain, bright winter morning sun and overcast days just on dusk and the orange lenses have given our eyes protection and great visibility in all those conditions. On our local trails the eye wear has outperformed other brands we have used in the past easily handling the low light of the pine forests and the open sunlit areas of Stromlo.

We've added the clear lenses to our collection as well as the darker F4 lenses and all have performed perfectly. After showing a number of fellow riders and letting them test out the glasses they have raved about the Gloryfy product, we've even bought Mum a set for her birthday!

There are many styles and colour options to choose from and you can also get prescription lenses made up. Luckily the styles we use are colour coded to our kit, looking thru the web page you will see that the designs are modern, euro-chic and practical all rolled into the unbreakable package. A point of note is that the G-Flex piece on the nasal bridge is very streamlined and despite this, the glasses don't slip down or feel uncomfortable which is great for those 7 hour solo rides and the epic all day road rides. The overall fit (to our heads at least) is comfortable, light and they are just as good off the bike as they are on the bike, our recent trip to Adelaide for hockey saw the Gloryfy's worn everyday whilst pitch side.

Pedal 4 Pierce raises much need funds and awareness for the [Muscular Dystrophy Foundation Australia](#), with the support of the community and companies such as Gloryfy unbreakable we can work together and make a difference. Paul has been very generous to us and through this we encourage of friends, family and supporters to have a look at the Gloryfy range and when you make a purchase you will be helping others.

Pedal 4 Pierce was created by Chris in 2009 at the age of 10, his idea was to "ride my bike around Stromlo and people can sponsor me" he decided to do this to "help people who research things". Pedal 4 Pierce was created to help find a treatment and cure for the many forms of Muscular Dystrophy. Pierce is a young Canberra boy who suffers from a rare form of Congenital Muscular Dystrophy – we ride for

Pierce and all those affected by Muscular Dystrophy.

We'd like to thank Gloryfy unbreakable and Paul for supporting us.
